

What is Input? What is Output?

Financial Statement Review Agent — sample test files included

Not PDF upload in this version. We do *not* upload a PDF for AI to invent Profit & Loss. We feed structured BS + P&L numbers. Rules check them. AI only explains evidence.

INPUT

- CSV files with Balance Sheet + P&L lines
- **2 years** (current + prior) — correct for YoY
- Pick company pack in UI (or API JSON)

Folder: data/SAMPLE-TEST-PACK/input/

Example lines: Revenue, COGS, Total assets, Equity...

OUTPUT

- Pass / fail math checks
- Balance Sheet identity check
- Year-on-year variance flags
- Review observations + evidence
- run id · trace id · notifications log

Folder: data/SAMPLE-TEST-PACK/output-examples/

Same pack shown in UI tabs / API response

Flow

CSV (2 years) → Validation + YoY rules → Findings → Observations (AI/templates) → **Review pack**

Two years only? Yes — that is enough and intended. Current year for checks; prior year for comparison. More years can be added later.

Test files to use

Input file	Purpose
acme_good_2022.csv / acme_good_2023.csv	Clean — expect Failed = 0
acme_broken_2022.csv / acme_broken_2023.csv	Broken — expect MATH + CONS fails
OUTPUT-clean-review-pack.json	Example output (clean)
OUTPUT-broken-review-pack.json	Example output (broken)
